To the Space Bureau:

Re: Space Exploration Holdings, LLC Application for SpaceX Orbital Data Center System ICFS File No. SAT-LOA-20260108-00016 Call Sign: S00798 Public Notice: DA-26-113

Formal Petition to Deny under 47 CFR § 25.154.

I am writing to express my strong opposition to the authorization of the "SpaceX Orbital Data Center" constellation of one million satellites. SpaceX's lawyers likely filed their papers just hours before the shutdown began (Jan 30), which is why Chairman Brendan Carr was able to tweet about it on February 4th using carryover funds. This is a dirty "pocket filing" tactic and seems to have been planned on purpose because the papers were actually prepared on January 8th. Meanwhile, the FCC is currently "closed" to me; the myicfs portal is down, and I cannot log in to file a comment until the government reopens. Therefore, I am filing this FORMAL PROTEST, which includes all of the necessary copies, affidavit, certificate of service, and notary signatures.

Since I cannot use the website right now, I am using the Paper Filing method that remains legally valid during shutdowns.

This proposal represents an unprecedented threat to the global commons of the night sky. Launching one million satellites, a 100x increase over current orbital density, creates an unmanageable risk by drastically increasing the mathematical probability of "Kessler Syndrome" collisions that would permanently render Earth's orbit unusable for all of humanity for countless generations.

Furthermore, the cumulative light pollution from these satellites will effectively end ground-based astronomy and destroy the heritage of a pristine night sky for every person on Earth. The night sky is a global commons and a heritage of humanity; it should not be fundamentally altered for the commercial gain of a single corporation.

Finally, the radio frequency pollution from one million satellites will also irreparably harm the global scientific community.

The FCC must prioritize the environmental and scientific integrity of our atmosphere over the private commercial interests of a single entity. I strongly urge the Commission to deny this application or, at the very least, stay all launch authorizations until a comprehensive, independent Environmental Impact Study is completed regarding the long-term effects on our atmosphere and orbital safety.

In conclusion, this proposal is an unprecedented and dangerous overreach that threatens the future of space exploration and the safety of our planet. It will also destroy terrestrial views of the night sky, and blind both light and radio-based astronomy. I urge the Commission to deny this application or, at minimum, stay all authorizations until a full, independent Environmental Impact Study is completed.

Regards,

William Stewart

I declare under penalty of perjury that the foregoing is true and correct.

Executed on February 12, 2026.
