

BEFORE THE  
**FEDERAL COMMUNICATIONS COMMISSION**  
WASHINGTON, D.C. 20554

*In the Matter of*

Space Exploration Holdings, LLC

ICFS File No.

Application for Authorization of

SAT-LOA-20260108-00016

Non-Geostationary Orbit Satellite

System (Orbital Data Center)

**INFORMAL REQUEST FOR COMMISSION ACTION REGARDING  
THRESHOLD ACCEPTABILITY, SERVICE CLASSIFICATION, AND  
ADMINISTRATIVE RECORD COMPLETENESS  
OF NICKOLAI G. BAKKEN**

Pursuant to 47 C.F.R. §§ 1.41, 25.112, 25.114 with petitioner's waiver request under 47 C.F.R.

Section 1.3 to the extent necessary.

**Date: March 30, 2026**

**Summary of the Filing:** This request places before the Commission threshold issues concerning the Application’s acceptability for filing, including service classification, completeness, and certification sufficiency. It identifies a classification defect requiring determination under Part 25, as well as the absence of a defined business plan or technical architecture in the certified record at the time of filing. It further invokes well established Commission precedent confirming the obligation to return non-compliant applications that are not evaluable when filed, including with this Applicant. Finally, it places into the record previously withdrawn or presently unavailable ex parte submissions and other related materials by the Applicant and Commission to ensure completeness of the administrative record under the Administrative Procedure Act. This submission is necessary to ensure the Commission’s review remains confined to certified statements in the record at the time of filing, notwithstanding any subsequent amendment, and to preserve Petitioner’s administrative rights.

|                                                                                                                              |           |

| 1. Return or Dismiss the Application as Unacceptable for Filing.....                                                         | 9         |
| 2. Deny the Applicant’s Milestone and Surety Bond Waivers.....                                                               | 9         |
| 3. Designate Material Matters for Hearing.....                                                                               | 9         |
| 4. Clarify the Treatment of Post-Filing Changes as Major Amendments.....                                                     | 10        |
| 5. Confirm the Governing Standard for Record Sufficiency and Service Classification.....                                     | 10        |
| 6. Restoration of Space Bureau’s Docket Submission PC0094253.....                                                            | 11        |
| <b>SCREENSHOT ATTACHMENTS.....</b>                                                                                           | <b>12</b> |

## **I. THRESHOLD REQUEST FOR COMMISSION DETERMINATION OF APPLICATION ACCEPTABILITY AND RETURN AUTHORITY**

### **A. Acceptability for Filing Under 47 C.F.R. § 25.112 and Authority to Return Applications**

Pursuant to 47 C.F.R. § 1.41, Nikolai G. Bakken (Petitioner) submits this informal request to place before the Commission threshold issues bearing on the Application's acceptability at filing under 47 C.F.R. § 25.112 and the Commission's continuing authority to return defective applications. This request addresses whether the Application, as submitted and certified, reflects a coherent and reviewable operational plan for the service described at the time of filing, and whether the nature of that service has been properly classified under Part 25.

## **II. SERVICE CLASSIFICATION DEFECT REQUIRING COMMISSION DETERMINATION PRIOR TO ACCEPTANCE**

### **A. 47 U.S.C. § 153(40) — Definition of Communications Service**

The Application describes a system whose primary function is the provision of high-performance computing and artificial intelligence infrastructure in orbit. At the time of filing, however, the Applicant was an established provider of broadband communications services, offering high-speed internet connectivity, including to underserved and remote areas, within a service category well established under the Commission's Part 25 framework for communications services. In this context, the Application reflects a departure from that established regulatory paradigm, with radiofrequency operations appearing ancillary to a stated computational purpose rather than the provision of communications services as defined by 47 U.S.C. § 153(40). To the extent the proposed system's primary function is non-communications computation, the Commission must identify the rule-bound basis on which such a system is classified and evaluated within an existing service framework.

## **III. APPLICATION COMPLETENESS, BUSINESS PLAN INTEGRITY, AND CERTIFICATION SUFFICIENCY BEFORE THE COMMISSION**

### **A. 47 C.F.R. §§ 1.52 & 1.65 — Certification and Continuing Disclosure Obligations**

The Application was filed on January 30, 2026. Subsequent to that filing, a widely reported all-stock merger occurred. Bizarrely, despite widespread public reporting and acknowledgment, the Applicant itself has not addressed this transaction in the record before the Commission through amendment or mandated supplemental disclosure for required public scrutiny or even any indication such information would be forthcoming. Meanwhile, public reporting, including by the Applicant, its Principals and its own website announcement indicates the merger occurred on February 2, 2026, shortly before the Commission's acceptance of the Application for filing.

In the absence of such disclosure, the Commission's review must be necessarily confined to the state of the record as of the time of filing. At that time, the Application does not identify

an attributable business plan, technical architecture, or operational framework specific to the proposed orbital computational service. The record, as certified, therefore reflects no defined implementation basis for the service described. On that record, the Commission must determine what, if any, basis exists for treating the Applicant as a provider of orbital computational services at the time of filing.

#### **B. 47 C.F.R. §§ 25.112, 25.114 — Completeness and Evaluability at Filing**

The Commission's rules require that an application be accurate, complete, and based on information available at the time of filing. Under 47 C.F.R. § 1.52, all statements of fact must be certified as true, complete, and correct to the best of the signatory's knowledge and belief. Furthermore, 47 C.F.R. § 1.65 imposes a continuing obligation on applicants to maintain the accuracy of information furnished, requiring prompt amendment where a substantial and material change occurs.

The Application, as filed, does not identify a detailed business plan, technical architecture, or operational framework specific to an orbital artificial intelligence compute system in attributable form. This indicates that, at the time of filing, the Applicant did not present a reviewable operational architecture for the specific service it seeks to authorize. To the extent the technical realization of the proposed service depends on post-filing developments not reflected in the certified record, the Commission must determine whether the Application was sufficiently complete and internally coherent to permit evaluation at the time it was submitted.

In the absence of an amended record addressing such developments, the Commission must identify the basis within the existing record on which it evaluates the proposed computational service.

### **IV. COMMISSION DISMISSAL PRECEDENT WITH APPLICANT (DA 24-300) AND AUTHORITY TO RETURN NON-COMPLIANT APPLICATIONS**

#### **A. 47 C.F.R. § 25.114 & § 25.114(c)(4)(i) — Mandatory Service Description Requirements**

The Commission's evaluation of any space station application is governed by the non-discretionary disclosure requirements of 47 C.F.R. § 25.114, which mandates that each application be complete in all respects. Under Section 25.114(c)(4)(i), the applicant must provide a detailed description of the service to be provided. While the Applicant has provided documentation for its broadband service, it has provided no such description for the computational services that constitute the Orbital Data Center. A broadband service description cannot serve as a legal proxy for an Applicant's admitted and disclosed industrial compute service.

**B. DA 24-300 & 47 C.F.R. § 25.114(a)(1) — Return of Non-Compliant Applications**

The Commission's authority to dismiss or return an application as unacceptable for filing is a continuing authority designed to preserve the integrity of the regulatory process. In *Space Exploration Holdings, LLC*, Order, DA 24-300 (SB rel. Mar. 26, 2024), the Space Bureau dismissed a SpaceX modification application on its own motion, concluding that the proposal did not substantially comply with Commission requirements and failed to constitute a comprehensive proposal necessary to sustain a satellite application under 47 C.F.R. § 25.114(a)(1).

Crucially, in that proceeding, the Bureau explicitly rejected the Applicant's request to hold the defective application in abeyance while it sought a rulemaking to cure the defects. The Bureau firmly held that an application must be acceptable when filed and that the Applicant "has gained no rights or status by the filing of the Modification Application" (DA 24-300 at para. 17).

Because the Applicant is now attempting the exact same procedural maneuver in the present proceeding less than two years later: filing an application that lacks a defined operational architecture for its proposed computational service and relying on post-filing waivers to cure threshold defects: the Applicant is already fully on notice of the Commission's position. The Space Bureau has already instructed this specific Applicant that it cannot use the Commission's docket as a holding area for defective applications while awaiting rule changes or waivers to make them acceptable. This precedent establishes that where a proposal lacks the comprehensive technical and operational data required for the Commission to satisfy its obligations under Section 25.114, it must be returned immediately without further consideration.

**C. 47 C.F.R. § 25.114(c)(4)(ii) & Globalstar Licensee LLC (2008) — Technical Requirement**

The failure to provide a specific operational architecture for the computational service also implicates Section 25.114(c)(4)(ii), which requires a technical description of the space station's reception and reception capabilities. If the computational load affects the power budget, thermal management, or orbital debris mitigation profile, those characteristics must be disclosed. The Commission has historically dismissed applications that provide only vague or speculative descriptions. In *Globalstar Licensee LLC*, 23 FCC Rcd 15207 (2008), the Commission reaffirmed that applications must reflect a concrete proposal rather than a theoretical ambition.

**V. APPLICANT'S PRIOR SUBMISSIONS, DOCKET IRREGULARITIES, AND APA RECORD COMPLETENESS**

Petitioner places on the record procedural conditions concerning the historical docket associated with the Applicant's prior technical and policy representations (ICFS File Nos. SAT-MOD-20070919-00129 and SAT-MOD-20230207-00022). These conditions bear on the

continuity, accessibility, and completeness of the administrative record relevant to the Commission's evaluation of the instant Application.

**A. 47 C.F.R. Part 1 (Subpart H) & 44 U.S.C. § 3301 — Ex Parte Disclosure and Agency Record**

On March 26, 2024, the Space Bureau dismissed the Applicant's modification application in SAT-MOD-20230207-00022 as unacceptable for filing (DA 24-300). The docket reflects that ex parte presentations and related submissions were made to Commission personnel during 2023 and early 2024 leading up to that dismissal. Notably, in a letter dated September 30, 2025, the Applicant explicitly attempted to withdraw its prior ex parte submissions dated May 10, June 8, and June 20, 2023, from the proceedings (see attached screenshot).

Consequently, certain materials are not presently accessible or fail to display attachments and substantive content on the public-facing record.

The Commission's ex parte rules, set forth in 47 C.F.R. Part 1, Subpart H, require the strict disclosure of these presentations to ensure transparency in agency decision-making. Furthermore, materials submitted to or received by the Commission in the course of its proceedings constitute agency records within the meaning of the Federal Records Act, 44 U.S.C. § 3301. These submissions remain subject to mandatory preservation and disclosure under the Freedom of Information Act, 5 U.S.C. § 552, irrespective of their current public visibility, any subsequent administrative obscuration, or any attempted withdrawal by the Applicant.

**B. 5 U.S.C. § 706 and 47 C.F.R. § 25.161(c) — APA Consistency and Prior Regulatory Positions**

To the extent any prior withdrawal or removal of such materials was administratively permitted, Petitioner has located these related ex parte presentations dated May 10, June 8, and June 20, 2023, within associated proceedings and independently submits and incorporates them herein as true and correct copies (**Exhibits A, B, and C**). These materials reflect that the Applicant previously urged strict enforcement of operational requirements to "prevent warehousing of scarce orbit and spectrum resources" and relied upon 47 C.F.R. § 25.161(c), asserting automatic termination where a station is not operational for 90 days.

Because the Applicant is now seeking unprecedented waivers of milestone and surety bond requirements for a million-satellite constellation, these prior contradictory policy positions bear directly on the Commission's evaluation. Their potential omission from the reviewable record raises a fundamental question as to whether the agency's review is based on the "whole record" within the meaning of 5 U.S.C. § 706. Petitioner identifies this structural defect to ensure completeness of the present record and to preserve all rights to judicial review. This includes both ordinary appellate review of any final agency action as arbitrary and capricious under 5 U.S.C. § 706(2), as well as extraordinary relief, including a petition for a writ of mandamus under 5 U.S.C. § 706(1), should the Commission unlawfully withhold

or unreasonably delay the restoration of a transparent and complete administrative record, along with de novo review regarding the adequacy of the Commission's adjudicatory fact-finding processes and statutory interpretations under 5 U.S.C. § 706(2)(A-F).

### **C. 5 U.S.C. § 706 — Relevance to Whole Record Review and Preservation of De Novo Appeal**

The ICFS ledger for SAT-MOD-20230207-00022 reflects additional filings between December 2023 and March 2024, including a March 26, 2024 submission by the Space Bureau's Satellite Programs & Policy Division (PC0094253) that coincides with the DA 24-300 dismissal order (attached as Exhibit D). Certain entries within this sequence also lack accessible attachments or substantive descriptions. (see screenshot)

In a letter dated March 27, 2026 (FOIA Control Nos. 2026-000479, 2026-000480, and 2026-000481), the Commission's Office of General Counsel predicated a FOIA fee waiver denial to Petitioner in part on the assertion that the public docket serves as the accessible mechanism through which the "public comment process allows members of the public to make factual arguments and opinions to the government in order to participate in agency decision-making".

However, as demonstrated by the inaccessible entries in the Space Bureau's ICFS ledger and the Applicant's September 2025 withdrawal attempt, the premise underlying that OGC determination is factually false on the face of the record. This condition underscores the immediate need to clarify the completeness and accessibility of the materials comprising the administrative record in this proceeding through FOIA and agency action for immediate public review. Stated plainly, the Commission must tell the public which record it is actually relying on to make its decision: the visible public docket, or the retracted version the Applicant's letter offers and Commission's records have made available, or any other combination of scenarios not visibly present before the public on this matter. Stated plainly, the Commission must tell the public which record it is actually relying on to make its decision: the visible public docket, the retracted version the Applicant's letter offers and the Commission's systems have obscured, or any other combination of scenarios not visibly present before the public on this matter. Correspondingly, the agency must clarify what it presumes the Applicant's official policy position to be in light of these hidden contradictions, or request such clarification from the Applicant directly, and on this public record.

### **D. Administrative Record Accessibility — ICFS Public Docket Completeness**

The ICFS docket reflects a sequence of filings between December 2023 and March 2024, including a March 26, 2024 submission by the Satellite Programs & Policy Division, Space Bureau (PC0094253), that coincides with the issuance of the dismissal order in DA 24-300 (attached as Exhibit D). Certain entries within this sequence do not presently display accessible attachments or substantive descriptions.

To the extent these materials formed part of the decisional record, their limited public accessibility bears on the transparency and reviewability of the Commission's processes.

In its Freedom of Information Act fee determination letter dated March 27, 2026, on FOIA Control Nos. 2026-000479, 2026-000480, and 2026-000481, issued to Petitioner by the Federal Communications Commission's Office of General Counsel, the Commission predicates its denial in part on the availability of the public docket as the mechanism through which the "public comment process allows members of the public to make factual arguments and opinions to the government in order to participate in agency decision-making." However, to the extent portions of that described system, including filings within the 2023 through 2024 sequence referenced above, are not presently accessible or lack substantive public visibility, the premise underlying that determination is not uniformly satisfied on the face of the record. This condition further underscores the need to clarify the completeness and accessibility of the materials comprising the administrative record in this proceeding through FOIA and agency action.

#### **E. 44 U.S.C. § 3301 & 5 U.S.C. § 552 — Record Preservation and FOIA Obligations**

Agency action must be based on consideration of the whole record. Materials submitted to, received by, or maintained by the Commission constitute agency records within the meaning of the Federal Records Act, 44 U.S.C. § 3301, and remain subject to preservation and disclosure obligations under the Freedom of Information Act, 5 U.S.C. § 552.

Where prior proceedings involve limitations in public accessibility of docketed materials, clarification of the record's completeness is warranted, particularly where such materials bear on the application of rules implicated in a pending proceeding.

Accordingly, Petitioner respectfully requests that the Commission:

1. Accept Exhibits A, B, C and D into the record of this proceeding;
2. Clarify the procedural status and effect of the withdrawn ex parte submissions referenced in the September 30, 2025 letter;
3. Confirm the availability and accessibility of filings submitted between December 2023 and March 2024 in SAT-MOD-20230207-00022; and
4. Ensure preservation of such materials as part of the Commission's administrative record.

Petitioner's Preservation: Petitioner incorporates by reference in this filing all prior assertions; including but not limited to; standing, rights, preservation, waiver, and good cause to the fullest extent permitted.

#### **VII. NOTICE OF 2 ON-ORBIT STARLINK MALFUNCTIONS AND FRAGMENTATION EVENTS**

Petitioner places on the record, without further expansion, recent public reporting of two separate on-orbit fragmentation events involving the Applicant's existing constellation within a four-month period. Specifically, the public record now reflects the malfunction and debris

ejection of Starlink satellite 35956 on December 17, 2025, and the fragmentation of satellite 34343 on March 29, 2026. Regarding the March 2026 incident, independent radar tracking by LeoLabs concluded the debris generation was likely caused by an internal energetic source rather than an external collision.

The generation of trackable debris from internal device failures directly contravenes the Commission's regulatory framework under 47 C.F.R. § 25.114(d)(14). Specifically, the FCC permits an applicant to assume a collision risk of zero only when a space station can be "maneuvered effectively." An internal fragmentation event instantly eliminates maneuverability, legally invalidating the zero-risk assumption. Furthermore, unplanned on-orbit fragmentation inherently corrupts the Applicant's existing certifications regarding the 1-in-10,000 human casualty risk upon reentry and the 1-in-100 risk of losing spacecraft control. Consequently, the Commission must demand that the Applicant submit updated, empirical orbital debris mitigation modeling that explicitly accounts for these hardware failure rates before evaluating the unprecedented million-satellite architecture proposed in the instant Application.

### **VIII. PRAYER FOR RELIEF**

The Petitioner respectfully requests that the Commission consider taking the following actions:

#### **1. Return or Dismiss the Application as Unacceptable for Filing.**

Pursuant to 47 C.F.R. § 25.112(a) and consistent with Space Exploration Holdings, LLC, Order, DA 24-300 (SB rel. Mar. 26, 2024), the Commission should return the Application without further consideration. Sections 25.112 and 25.114 require that an application be substantially complete and contain a comprehensive technical and service description sufficient to permit evaluation at the time of filing.

#### **2. Deny the Applicant's Milestone and Surety Bond Waivers.**

The Commission should deny the Applicant's requests for waivers of 47 C.F.R. §§ 25.164 and 25.165. The administrative record, supplemented by the Applicant's own prior pleadings (Exhibits A-C), establishes a clear policy imperative against the warehousing of spectrum and orbital resources. A waiver permitting the phased, indefinite deployment of one million satellites without standard regulatory safeguards is inconsistent with the Applicant's own documented standard for spectrum stewardship.

#### **3. Designate Material Matters for Hearing.**

Pursuant to 47 U.S.C. § 309(e), 47 U.S.C. §§ 308(b) and 403 the Commission "shall" designate the Application for hearing where it is unable to make the requisite public interest finding or where the record presents a substantial and material question of fact.

See, e.g., *In the Matter of 97.5 Licensee TX, LLC et al.*, MB Docket No. 26-19, *Hearing Designation Order* (rel. Jan. 23, 2026). This obligation attaches to the Commission's evaluation of the Applicant's qualifications, candor, and compliance with the Commission's rules. On this record, the Commission is unable to make the requisite public interest finding without resolving substantial and material questions of fact, including the implications of the absent or inaccessible administrative record materials, and whether: (a) the Applicant satisfied its obligations under 47 C.F.R. § 1.65 by maintaining accurate ownership disclosures following the xAI transaction; (b) the Application, as certified under 47 C.F.R. § 1.52, was complete, accurate, and supported by a defined technical and operational plan at the time of filing; (c) the Applicant has maintained candor and consistency in its technical, operational, and policy representations across filings and proceedings, including its September 2025 attempt to withdraw prior contradictory ex parte submissions; (d) the Applicant has complied with required disclosures on Federal OMB-controlled instruments, including Schedule S, or has improperly relied on unsupported waiver positions in lieu of providing required data; (e) the Applicant's environmental certifications are supported by a sufficiently defined and bounded system architecture; (f) the representations made in this record, including its citations involving NASA and other third-party authorities, accurately reflect the underlying sources.

#### **4. Clarify the Treatment of Post-Filing Changes as Major Amendments.**

The Commission should further clarify that material changes to the nature, scope, or operational basis of the proposed system must be treated as major amendments under 47 C.F.R. § 25.116, and may not be introduced as minor amendments or post hoc clarifications.

#### **5. Confirm the Governing Standard for Record Sufficiency and Service Classification.**

The Commission should confirm that its evaluation is governed by the completeness, accuracy, and evaluability requirements of 47 C.F.R. §§ 25.112, 25.114, 1.52, and 1.65, applied as of the time of filing and certification. The Commission should further confirm that its determination is based on consideration of the full administrative record, consistent with the requirements of the Administrative Procedure Act.

Materials submitted to, received by, or maintained by the Commission in the course of its proceedings constitute agency records within the meaning of the Federal Records Act, 44 U.S.C. § 3301, and remain subject to preservation and disclosure obligations under the Freedom of Information Act, 5 U.S.C. § 552, irrespective of subsequent withdrawal from a public-facing docket. The Commission must explicitly identify whether its determination relies upon the visible public docket or the Applicant's retracted submissions. To the extent prior submissions bear on the interpretation or application of the governing rules, they form part of the record the Commission must consider in evaluating the Application.

The Commission should further clarify the service classification framework applied to the proposed system, including the basis for evaluating computational infrastructure under rules governing radio communication services as defined in 47 U.S.C. § 153(40).

The determination of whether this filing satisfied the completeness, accuracy, and evaluability requirements of Sections 25.112, 25.114, 1.52, and 1.65 bears directly on the appropriate procedural path forward and the integrity of the Commission's adjudicatory functions.

#### **6. Restoration of Space Bureau's Docket Submission PC0094253**

Direct the restoration to the public-facing docket, or formal inclusion in the current record, of the March 26, 2024 submission of the Satellite Programs & Policy Division, Space Bureau (PC0094253), as well as the Applicant's withdrawn ex parte submissions from May and June 2023. The Commission must clarify its authority, if any, to remove or obscure its own docketed filings or permit the retroactive withdrawal of material factual representations by an Applicant; and, if such material is not restored, acknowledge that it remains an agency record subject to mandatory disclosure under 5 U.S.C. § 552.

Respectfully submitted,

/s/ Nikolai G. Bakken

Re: *ICFS File Nos. SAT-MOD-20070919-00129 and SAT-MOD-20230207-00022*

Dear Ms. Dortch:

SpaceX hereby withdraws its ex parte submissions in the above referenced proceedings dated May 10, 2023, June 8, 2023, and June 20, 2023.

Sincerely,

*/s/ Joseph Bissonnette*
